

# Software Security and SOA: Danger, Will Robinson!

---

Jeremy Epstein, Scott Matsumoto, & Gary McGraw. IEEE Security & Privacy, January/February 2006.

## From the First Paragraph

The current buzzword of choice among the technical elite (at least those subject to marketing departments) is service-oriented architecture, or SOA (pronounced “SO-uh”). As SOA moves from hype to practice, an opportunity exists to do security right, but a similar opportunity exists for disaster if security is done wrong. This article describes 13 snares that we must avoid to end up with SOA security that makes sense.
